## OBJECTIVE

To utilize my strong technical skills in automation engineering and programming languages to transition into a role as a Developer, where I can contribute my expertise to developing and delivering high-quality software solutions.

## EXPERIENCE

### Automation Engineering Wefix Holon

Nov-2021 – Today

- Manual testing for web and mobile systems - test planning and test documentation writing.
- Developed and maintained automated test scripts using Selenium WebDriver in Python, testing the user interface of a web application built with Angular.
- Conducted testing of backend APIs using Python and Postman to ensure data integrity and load and performance testing and verify the correct handling of requests and responses.
- Collaborated with the development team to design and implement new features for the web application, ensuring high quality and usability through automated testing.
- Utilized Git for version control and source code management, collaborating with the team on code reviews and merges.
- Documented test plans, test cases, and defects using JIRA, ensuring clear communication and traceability throughout the development cycle.

## EDUCATION

### BSc, Computer Science Lev Academic Center Jerusalem

2018 – 2021

The college greatly increased my skills of coding and working with classmates.

### Python project Clothing Store API Server

The Clothing Store API Server project involved developing a RESTful API server using Python's FastAPI web framework and MongoDB as the database. The goal of the project was to provide a scalable and efficient platform for managing the inventory and sales of a clothing store.

### Java project 3D Image Renderer

Designed and modeled a 3D graphical scene, using Design Patterns techniques supporting Agile and Test-Driven Development.

## SKILLS

Python, Java, Angular, Rest API, FastAPI, Git, MongoDB, SQL.
