PROFESSIONAL SUMMARY

Following and practicing up to date exercises and approaches of full stack web development with an approximate experience of 3 years, along with separate backend & frontend technologies as a .NET developer and up to date practices in various .NET frameworks or other server-side technologies & languages in a flexible schedule.

Published a few microservices, APIs, (rest api, soap), websites with Azure Cloud and AWS along with other means in an organized agile oriented methodology.

Understanding of web design & architecture design patterns, adhered to modern testing & unit tests and performance testing tools to detect and remedy errors and omissions.

Experience

Freelance, Internationally – Full Stack Web Development 2020 – 2021

- Producing code in programming languages such as C# and TypeScript to create the most effective and clean websites with multithreading practices for the client with success.
- Improved JS (JavaScript) ES6, TypeScript and CSS code to enhance UX and UI functionality and comfortability for the client with satisfactory reaction.
- Ensuring secure patterns and structures for managing databases and user credentials along with other types of data and passing security tests successfully for about 75%.
- Redesigning and managing various websites and databases with git deployment successfully for about 80% of the clients.

System Administrator, IDF – Windows System & Web Administrator 2021 – 2022

- Providing support and fixing network related errors and problems by engaging with the team in an inventive and automated way reducing the overall team's work by about 50%.
- Increased performance and maintained usability of the systems and networks at hand successfully replacing about 2 or more people's work.
- Working with various coding tools, languages, scripts and network related programs at hand to solve problems as well as modifying and creating scripts to automate the process with a relatively high success rate > 40%.
- Managing and troubleshooting an identity card military software for identity encoding and card management for a military base with overall > 80% success.

Skills

- Full Stack development proficiency in .NET environments including .NET Core, .NET Framework, and ASP.NET / MVC / Core with OOP paradigm or FP and other methods using git version control for deployment and throughout work.
- Front end technologies and frameworks, such as: React, jQuery, SCSS/SASS and Bootstrap, HTML/HTML5, and Redux, and PHP ; Proficiency in Excel and various Office applications.
- Development in both SQL and NoSQL, ranging from MSSQL to MongoDB / Mongo, Redis.
- Deployment using git, github along with Azure DevOps ci/cd pipelines.
- Professionally written English, Hebrew and Russian, technical skills and server maintenance.

Education

Open university of Israel – Computer Science and Mathematics B.Sc (93)

2021 – 2023

Learning and managing with languages ranging from object oriented like C# or Java, to functional like Python, computer logic and algorithms, OS management and development in different environments and computer systems.

- Worked on a few A.I pet projects and algorithm related back-end code in python and java.
