Summary:

Full stack developer with extensive experience in simultaneous project management. Strong interpersonal skills.

Experience:

Full Stack Developer - Chat System – 2024

A real-time messaging application functionally similar to WhatsApp, featuring user login, personal and group messaging, group management, user blocking, and conversation history. The application uses React and Redux for the frontend, Node.js and Express.js for the backend, MongoDB for data storage, Socket.IO for real-time communication, and JWT for user authentication.

Full Stack Developer - Factory System - 2023

Developed a full-stack plant and employee management system using RESTful APIs and server-side development with Node.js. Client-side architecture was planned in HTML prior to development. Server-side operations involved CRUD operations using Node.js, with MongoDB handling database management and Mongoose for object modeling. Authentication was implemented using jwt-express. On the client side, HTML was used for development, with CSS for styling. Permissions were enforced to restrict actions to authorized users.

Full Stack Developer - Cinema System - 2023

Developed a movie and subscription management system utilizing two REST API servers and a client-side built with React.js. Initial architecture planning was conducted by Archita. Server-side operations were implemented using Node.js and Express, with CRUD operations and database management handled by MongoDB and Mongoose. Authentication was ensured using jwt-express. On the client side, React.js and Redux were utilized for development, with CSS for styling. Permissions were enforced to allow authorized users to perform specific actions.

Education:

Yaniv Arad - Tech Training Labs, 2023

Skills:

HTML | CSS | JavaScript | React.js | Node.js
